[57] ABSTRACT

A face bow for fabricating occlusal restorations which can be readily adapted to several different types of known articulators and which face bow has toggle and bite fork assembly which is rendered readily removeable after the impressions of one of the jaw teeth has been made, whereby casts of such impressions can be made without tying up the entire face bow assembly.

An embodiment of the face bow is further constructed so as to compensate for any bi-lateral asymmetrical difference of a patient's left and right condylar distances.
